Shetland Aerogenerators Ltd is a local, family-run company that has pioneered clean energy in Shetland. Business activity covers the development, ownership, operation and maintenance of wind energy assets and energy sites in Shetland.

The company agrees that Climate Change is the most serious issue of our time. Achieving net zero will require changes that are unprecedented in their scale and scope, including changes to the way electricity is generated, how people travel, how land is used and how buildings are heated. Shetland Aerogenerators will operate to have a positive contribution to the energy transition.

Shetland Aerogenerators Ltd provides a range of in-house renewable project management services and onsite engineering services, maintenance and repair of onshore Wind Energy Projects.

Shetland Aerogenerators Ltd recognise that delivery of its activities can have environmental and social impacts. We are therefore committed to minimising negative impacts alongside the promotion of activities that can have a positive effect on our environmental performance.

Our commitment is to protect the environment, prevent pollution, follow established performance measures and maintain our integrated management system and the ISO 14001:2015 certification.

To achieve this Shetland Aerogenerators Ltd shall:

- Set objectives covering our significant environmental aspects, monitoring the progress made in achieving these objectives, as appropriate, by using the management review process and communicating the results to staff.
- Comply with all relevant environmental legal requirements, together with any applicable codes of practice or standards issued by clients and industry.
- Work with clients and suppliers towards providing sustainable solutions with appropriate regard to economics, the community and the environment.
- Seek to use materials efficiently, make prudent and economic use of natural resources, have proper regard to waste management by considering reduction, reuse, recycling and recovery to disposal.
- Avoid the use of environmentally hazardous material and processes where practicable and take all reasonable steps to prevent pollution.
- Actively promote awareness of this policy, the Environmental Management System and the environmental risks associated with the company activities to those involved.
- Cultivate personal responsibility for considering the environmental aspects of all activities and allocate appropriate environment training where necessary.
- Regularly review the environmental management system, which is an integral part of the company's Integrated Management System and ensure it is communicated to all employees and any updated information is relayed through the various channels and displayed where appropriate.
- This Policy shall be made available to all interested parties.
